flex

flex-grow

flex-shrink

align-self

flex: flex-grow flex-shrink flex-basis;

flex: initial; -> flex: 0 1 auto;
flex: auto; -> flex: 1 1 auto;
flex: none; -> flex: 0 0 auto;
flex: value; -> flex: value 1 0%;

Properties for the Parent (flex container)

How the container should behave?

display:

flex makes the container act display block

inline - flex makes the container act display inline

Distribute the extra space between items along the cross axis

align-items: cross axis

stretch (Default) stretch to fill the container

flex-start cross axis align items to start

center cross axis align items center

flex-end cross axis align items to end

baseline align baselines

When flex-direction is column, justify-content changes to vertical and align-items to horizontal

flex-flow: flex-direction flex-wrap;

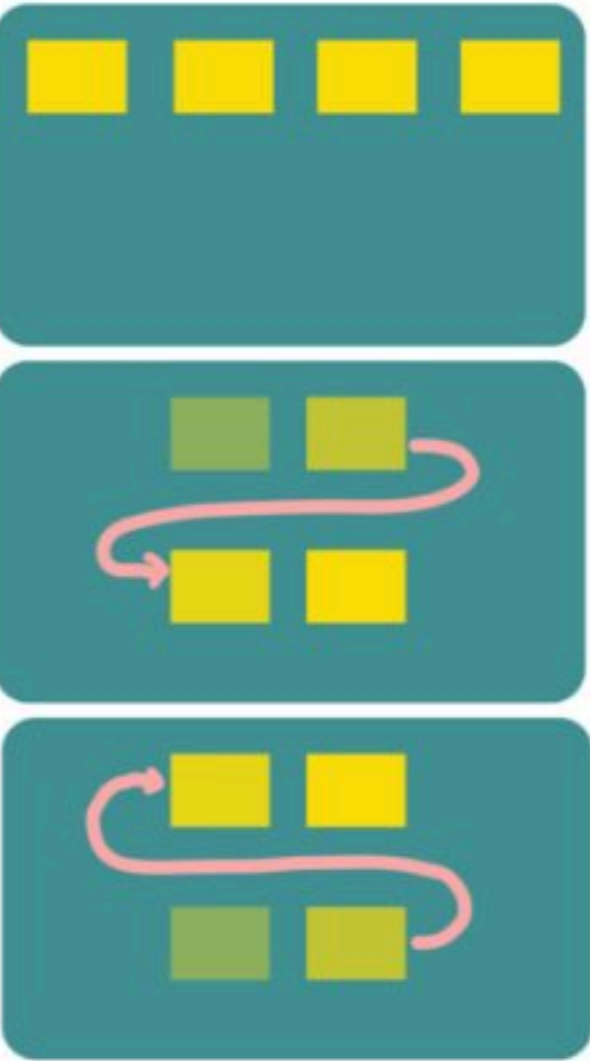

Wrap the items as needed

flex-wrap: Requires width/flex-basis

nowrap (default) all items will try to stay on one line

Wrap if items don't fit they will wrap and create a new line below

Wrap-reverse if items don't fit they will wrap and create a new line above

Distribute the extra space along the main axis

justify-content: main axis

flex-start (Default) items anchored to the start

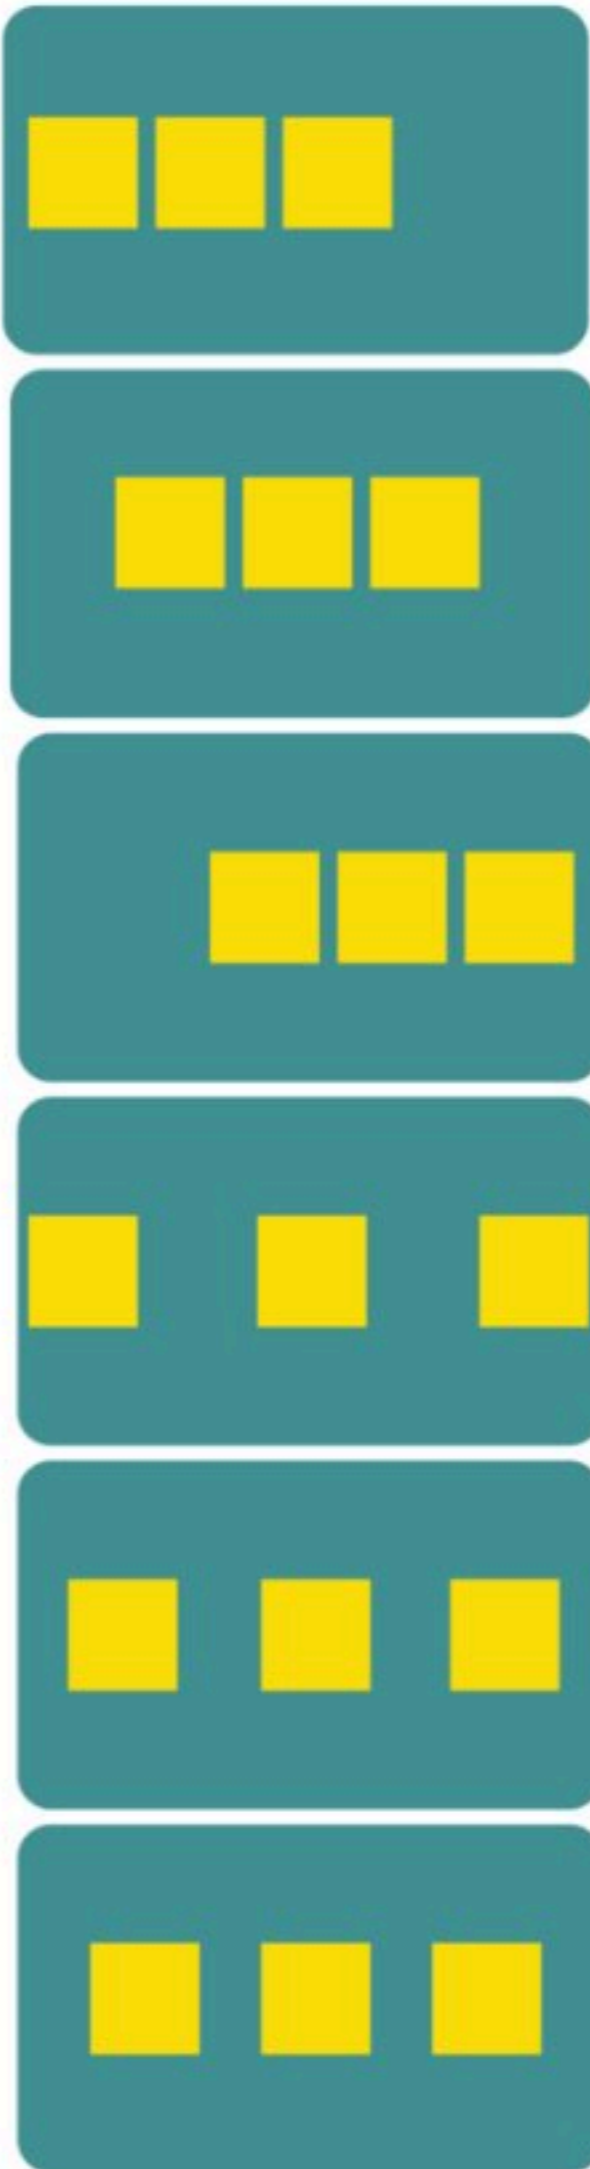

center items centered

flex-end items anchored to the end

space-between items evenly distributed in the line. First item in on the start and last item is at the end

space-around start and end items are not to the edge but have 1 unit of space on each side

space-evenly similar to space-around, except all space is the same

When flex-direction is reverse, start and end are also reversed

place-content: align-content justify-content;

Set the main axis to vertical or horizontal

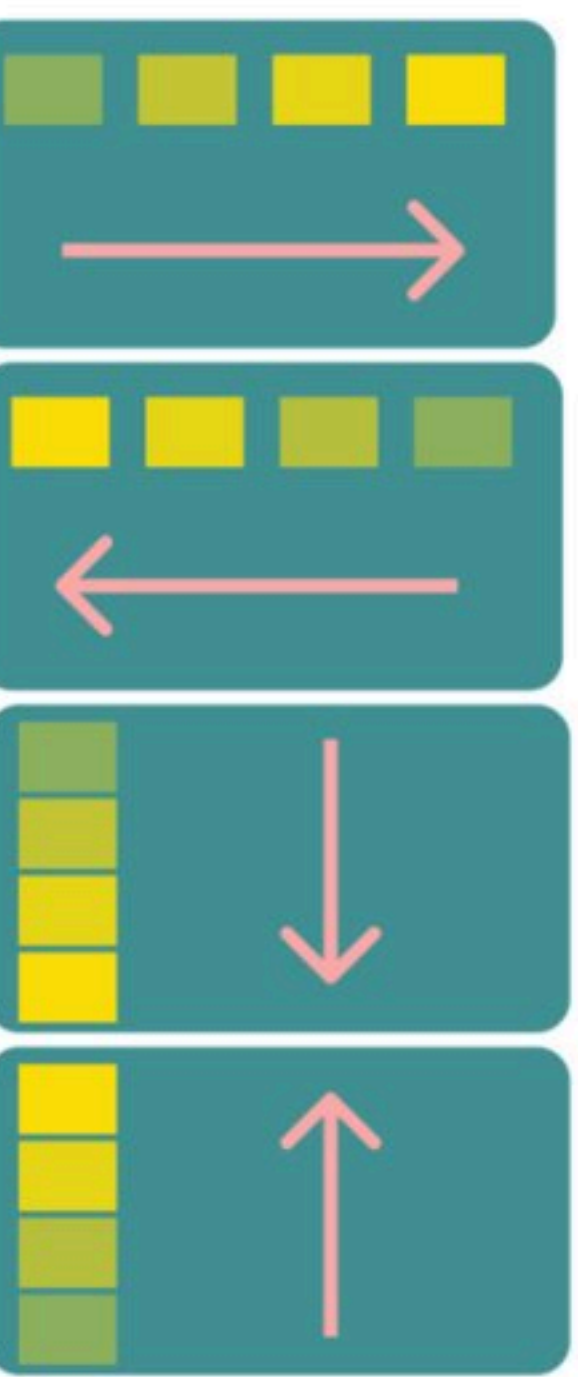

flex-direction:

row (Default) left to right

row-reverse right to left

Column top to bottom

Column-reverse reverse = bottom to top

Distribute the extra space of lines of items along the cross axis + flex-wrap

align-content:

stretch (Default) lines stretch to take up the space that is left

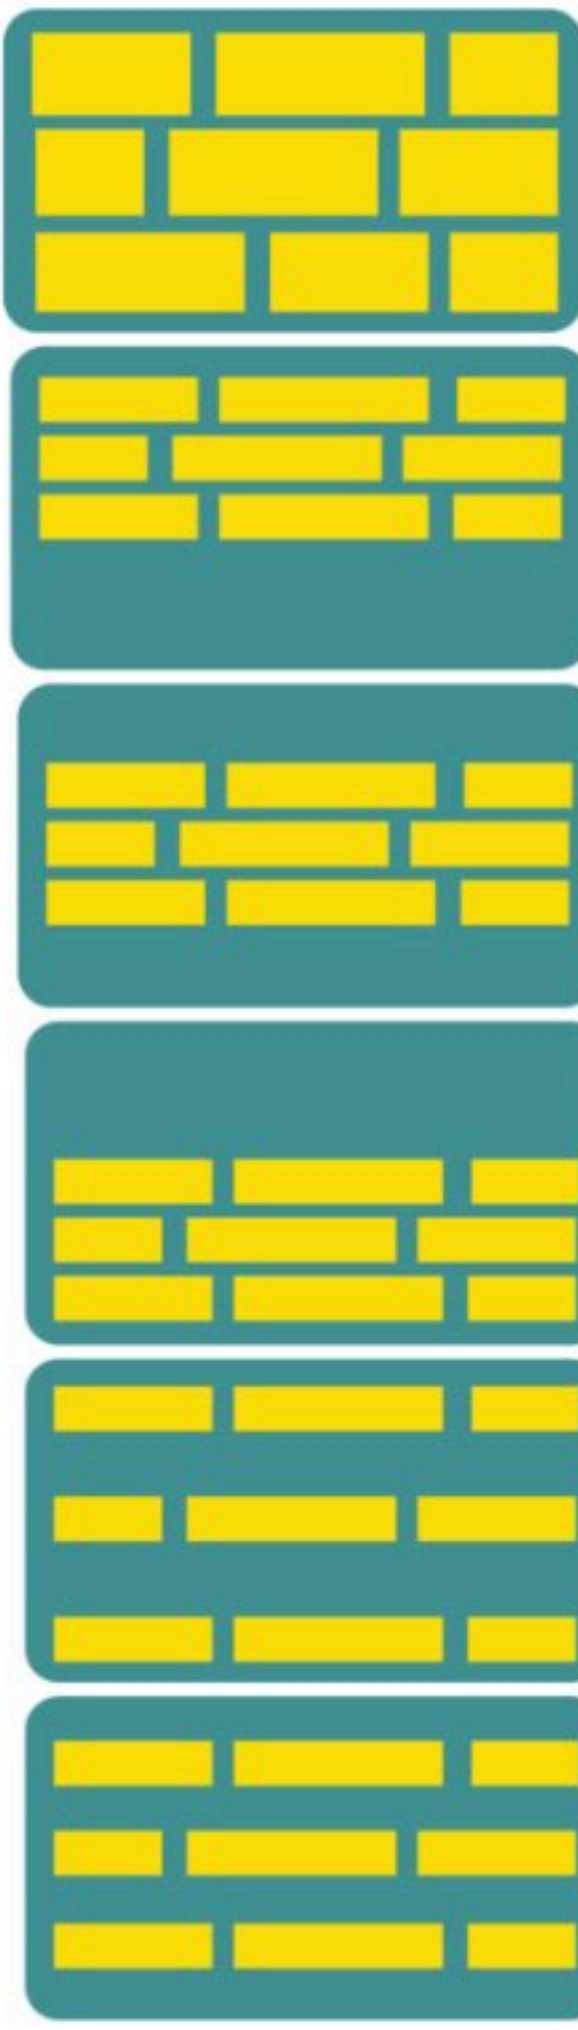

flex-start items anchored to the start

center items centered

flex-end cross axis align items to end

space-between first line at the start of the container and the last one is at the end

space-around lines are evenly distributed with equal space around each line

Properties for the Children (flex items)

Change the order of the item

Order:

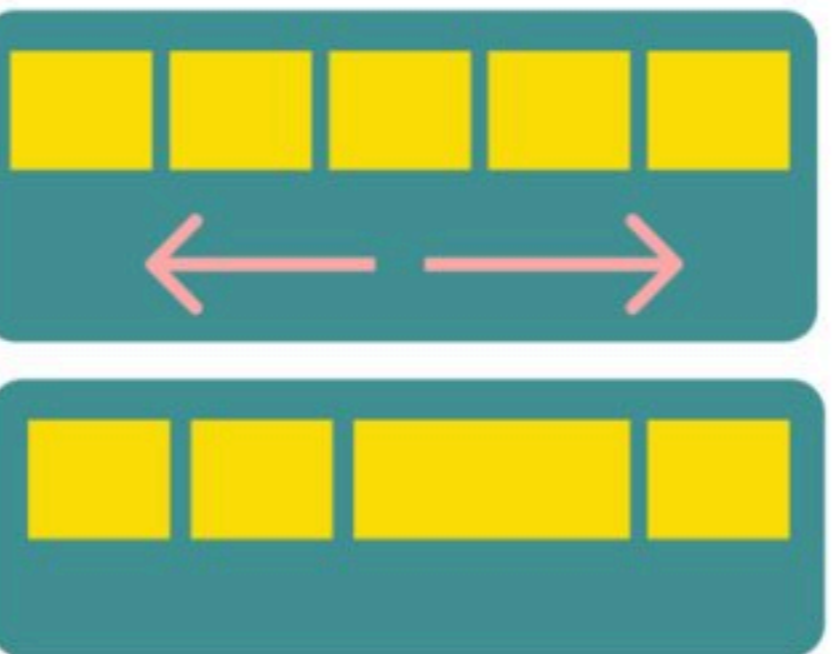

[number] default is 0

Let one item take more sapce than the other items

flex-grow

[number] default is 0

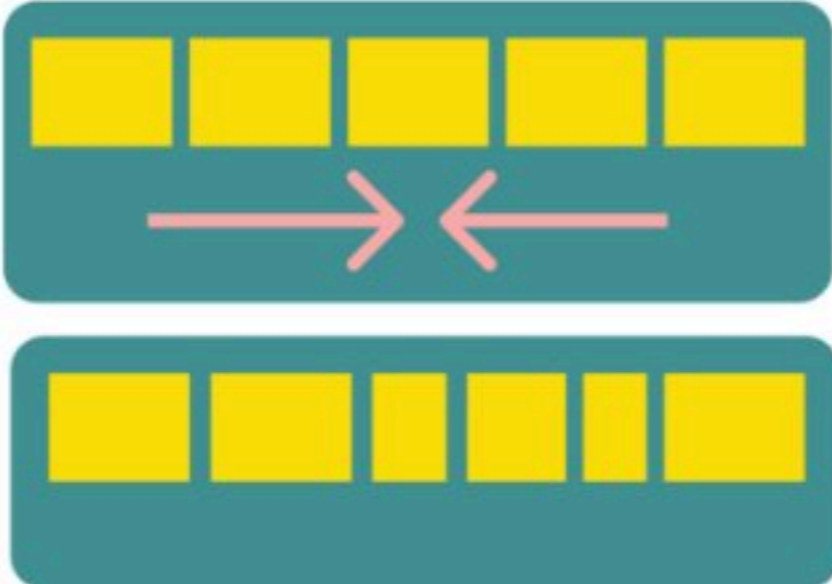

If one of the children has a value of 2, then the it would take up twice as much space as the others

Let one item take less sapce than the other items

flex-shrink

[number] default is 0

If one of the children has a value of 2, then it shrinks two times more than the rest

Set the default size of the item before the other item sizes are set

flex-basis

auto (default) look at my width or height property

[length] A number followed by px, em, rem, or %.

Override the align-items value for a particular item

align-items: self

stretch (Default) stretch to fill the container

flex-start cross-start margin is on the cross start line

center centers are aligned

flex-end cross-end margin is on the cross end line

baseline baselines are aligned

auto
